2 TECHNICAL CHARACTERISTICS

P-series motors

Pole change motors with two speeds.

A-series motors

Frequency converter controlled motors with adaptive speed range (ASR). The lifting speed can be controlled by the operator, but the highest obtainable speed depends on the load. Nominal ASR speed can be reached at 100% load, and with lower loads the speed increases progressively, but is limited by the maximum ASR speed. The load where the maximum ASR speed can be reached is shown as a percentage of the hoist load.

S-series motors

Frequency converter controlled motors with optional extended speed range (ESR). The lifting speed can be controlled by the operator. Without ESR enabled, the lifting speed is not affected by the load.

With ESR enabled, the highest obtainable speed depends on the load. Nominal ESR speed can be reached at 100% load, and with lower loads the speed increases progressively, but is limited by the maximum ESR speed. The load where the maximum ESR speed can be reached is shown as a percentage of the hoist load. The difference to A-series is that the S-series motors have more power, so the nominal ESR speed is much higher than the nominal ASR speed and it is reached with higher loads.

NOTICE

If the nominal ASR or ESR speed shown in the table exceeds the corresponding maximum speed, the maximum speed applies. The nominal values are automatically calculated and subject to unit conversion, so such discrepancies may occur.

4 TRAVELING MOTORS

These motors are driven with fixed voltages and frequencies with the below specified line voltages (=frequency converter supply voltage). Motor nameplate data is the same for all line voltages. Other voltage/frequency versions are not available for these motors.

4.1 Frequency converter traveling motors 3000 rpm (100 Hz), 3600 rpm (120 Hz) and 4800 rpm (80 Hz)

¹⁾ The maximum speed depends on the line voltage. With higher line voltage greater speeds can be achieved.

The table is calculated with maximum loads for the hoists. With derated loads it may be possible to use smaller frequency converters. In these cases the frequency converter selection must be verified with KC Drive or Markman.

Abbreviation	Explanation
LHO	Left hand ordinary lay
RHO	Right hand ordinary lay
SD	Rope for Standard Duty Use
HD	Rope for Heavy Duty Use
RR	Rotation Resistant Rope

Abbreviation	Explanation
PWRC	Parallel wire rope centre
PWRC(K)	PWRC with compacted strands
WC	Steel core
WSC	Wire strand core
IWRC	Independent wire rope core
EPIWRC	IWRC covered with a polymer

Suitable alternate ropes: Please see the document 140665.

Notice 1: The shown Minimum Breaking Loads are the minimum allowed and may vary in the delivered ropes.

Notice 2: The shown rope Construction is the nominal and may vary in the delivered ropes.
